

## TabletExGear Comox Harness

MOLLE compatible harness

### Highlights

- Super comfortable!
- Field equipment at your fingertips: Keep your essential field equipment close at hand.
- Compatible with backpacks: Convenient to wear under your backpack
- Expandable: Customize the strap by adding accessories like a radio holster, bottle holster or utility pouch!

The Comox Modular Harness - is the same super-comfortable harness used on the Ruxton and Jervis Packs.

The Comox Harness uses a MOLLE compatible system (modular lightweight load carrying system) to attach pouches, holsters and backpacks to the harness.

It is made of mesh with three rows of high-density foam on the wearer's body. This allows the harness to be well ventilated and remain comfortable in all conditions.

MOLLE compatible items are attached to the belt by weaving the included plastic rods through alternating rows of webbing on the belt and on the back of the item to be attached to the belt. The rods can be removed from the belt by opening the zippers that run along the bottom of the belt. The bars also ensure that the harness retains its shape and provide the wearer with some protection from the attached items.
